

A hybrid cloud backup solution that protects any virtual, physical, or cloud environment

Acronis Backup Cloud provides backup, disaster recovery and secure data access for SMBs and enterprise clients. Highly customisable and affordable, Acronis solutions include physical, virtual, and cloud server backup software, storage management, secure file-sharing, and system deployment. And it's the ultimate protection for Microsoft Office 365 email, contacts, calendar, and attachments. It's a safe, scalable backup and recovery solution that protects your systems and devices from anywhere at all times.

KEY FEATURES

Complete protection/Security/Acronis active protection

Protect everything on Windows and Linux servers, any hypervisor, PCs, Macs, iPhone, iPad and Android devices, and Office 365 mailboxes. Keep data safe with advanced ransomware protection of backups and endpoints, data encryption in transit and at rest, network-based login restrictions, and more. Protect data and systems from ransomware attacks by detecting, blocking, and reversing suspicious changes to data, backup files, and backup agent.

Flexible storage options/Disk-imaging backup

Increase business resiliency by storing your backups in up to five locations, including local disks, NAS, SAN, and proven and secure Acronis Cloud Storage. Recover a complete image or selected files, folders, items, and applications, and revert to a specific point in time quickly.

Acronis ASign

Support the authenticity of files with signatures enabled by blockchain.

Advanced reporting and monitoring

Customisable reports can identify issues in your infrastructure. You can also receive customisable alerts based on monitoring.

KEY BENEFITS

Quick recovery and no downtime

Achieve recovery time objectives (RTOs) of 15 seconds or less. With near-instant recoveries, you'll avoid operational outages, loss of productivity, and downtime caused by infections and recovery efforts.

Fast and easy backup

Switch from legacy solutions and deploy backups in just three clicks. Run backups as often as you need, with no impact on performance. And avoid disruptions while moving to another system.

Reduce storage space

Deduplication and off-host operations will save computer and networking capacity, and, as a result, save money and time.

Cost-efficient

Save money on infrastructure by leveraging on-premises or cloud deployment models for management servers.

The screenshot displays the Acronis Backup Cloud management console. On the left is a dark blue sidebar with navigation options: DEVICES, BACKUPS, ACTIVITIES, ALERTS, SETTINGS, and ABOUT. The main area, titled 'All machines', lists four machines with their respective backup statuses and actions.

| Machine Name | Status | Last backup | Next backup | Action |
|-----------------------|---------------|------------------------|------------------------|------------------------|
| bazure1 | OK | May 17, 2016, 02:23 AM | May 10, 2016, 02:03 AM | BACK UP NOW, RECOVER |
| WIN-AMAZON001 | OK | May 17, 2016, 02:24 AM | May 18, 2016, 02:13 AM | BACK UP NOW, RECOVER |
| iMac-Capitan-FD.local | Not protected | — | — | ENABLE BACKUP, RECOVER |
| Win2016TP4 (3163) | Not protected | — | — | ENABLE BACKUP, RECOVER |
