Advanced threat and data protection for Office 365 and cloud file-sharing services

Trend Micro Cloud App Security enables you to embrace the efficiency of cloud services while maintaining security. It protects incoming and internal Office 365 email from advanced malware and other threats, and it enforces compliance on other cloud file-sharing services, including Box, Dropbox, Google Drive, SharePoint Online, and OneDrive for Business. Cloud App Security integrates directly with Office 365 and other services using APIs, maintaining all user functionality without rerouting email traffic or setting up a web proxy.

KEY FEATURES

Powerful enterprise-grade security

Files are kept safe through advanced detection techniques, such as artificial intelligence, machine learning, document exploit detection, sandbox analysis, data loss prevention, and threat scanning. Files shared from remote workers, partners, and mobile devices are all scanned to ensure threats don't migrate through cloud file-sharing services. You can also do a manual scan when needed.

Controls and protects sensitive data

Get data loss prevention (DLP) and advanced malware protection for Box, Dropbox, Google Drive, SharePoint Online, and OneDrive for Business for compliance. You'll also get visibility into sensitive data use in Exchange, SharePoint, and OneDrive with easy-to-use templates.

Easy API integration

API integration doesn't rely on redirecting email or web proxies, and it integrates quickly and automatically with Office 365 and other cloud services. It also preserves user and administrator functionalities on any device.

Centralised administration

Centrally manage threat and DLP activity across cloud services, endpoints, and web traffic with Control Manager.

KEY BENEFITS --

Easy deployment

API integration makes for a quick and easy deployment, without burdening IT with any software, device, or user setting changes. This saves time and keeps users from feeling any impact.
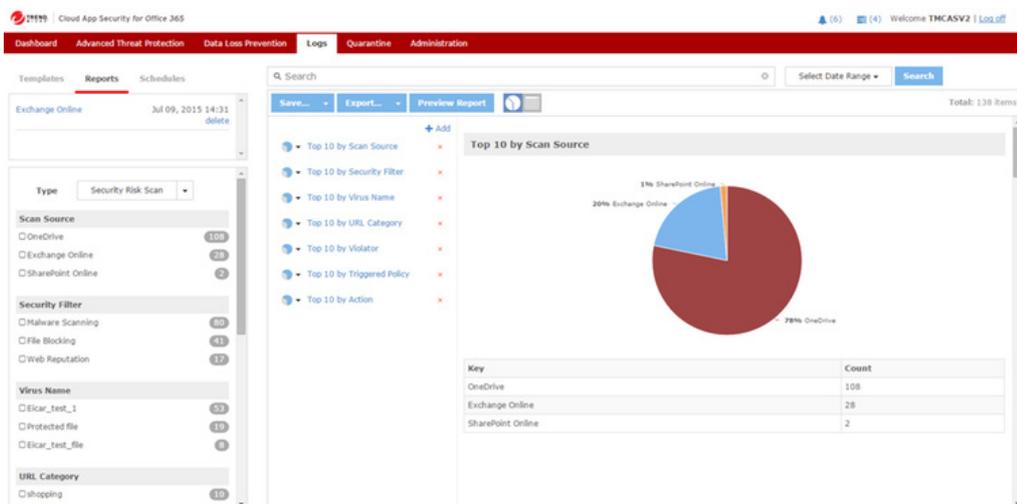

Robust protection

Office 365 email and cloud apps stay protected against malware, ransomware, and other attacks, keeping your sensitive files and information secure from infection and data loss. In 2017, Cloud App Security stopped 3.4 million high-risk threats that weren't caught by Microsoft Office 365. You'll be able to communicate and collaborate more confidently on the cloud.

Increased productivity

Reduce the time, resources, and risks associated with ransomware and malware by stopping it before it gets through.

Users don't detect any changes

With a light footprint, protection stays transparent to end users who won't notice any interference with their systems.
